PRESS RELEASE

Resin (Products & Technology) B.V. receives ISO 9001:2008 certification

Enschede, 16 March 2010 – Resin (Products & Technology) B.V., a company focussed on the development and production of polymer based compounds, was awarded the ISO 9001:2008 certificate. The certification process was conducted by the TÜV NORD Group.

“We have undertaken extensive preparations for the certification process over the last years and are very proud at achieving this milestone in our development,” says Frans Haafkens, CEO of Resin. “Since our foundation in 2006, we have initially focussed on optimising our production lines and infrastructure and on building an experienced and competent team. With our customer base broadening and the number of multinational customers growing, ISO certification became a logical next step.” Besides its close production partnerships with a number of key customers, Resin has built a track-record around its ability to develop and produce complex compound systems. It has developed leading expertise in innovative areas such as halogen-free flame retardant systems, improving barrier properties and the development of PVC replacement polymer systems.

About Resin

Resin is specialised in the development and production of polymer based compounds and originated in 2006 from the production facilities of outdoor furniture manufacturer Hartman Outdoor Products. Over the last few years, Resin expanded its activities beyond the furniture market and currently serves industrial customers in the automotive, packaging, construction and consumer products markets.
